

Explaining RA With the Spoon Theory

by NEWLIFEOUTLOOK TEAM

Understanding the Spoon Theory

Explaining your condition has become almost a part of the territory of having a chronic illness like rheumatoid arthritis (RA). When people can't see visible evidence of a condition, they may doubt the pain and experiences you endure.

For Christine Miserandino, trying to explain her experiences with lupus to her friend drove her to come up with the now-famous explanation used by many people around the world — the spoon theory.

Using spoons to represent energy, she explained each activity she completes in a day “costs” a certain amount of spoons. She has a certain amount depending on the day, and once they run out she has no more energy left.

Chronic illness sufferers across the globe are now using her theory to help others better understand what they're going through. Read on to learn more!

what is Spoon Theory?

The **Spoon Theory** was created as a way for people with chronic illness to explain their experience to others.

Despite this, there is still a lack of understanding towards sufferers.

HOW IT WORKS

When you have a chronic illness, you have a **limited number of spoons** for each day — and each task you complete costs a certain number of spoons.

Once your spoons are gone, they're gone.

Say you have **10 tasks** to accomplish in a day — like showering, getting dressed, going to work, etc. — and only **10 spoons** for that day.

Some tasks may require more than one spoon, so some things won't get done. You could dip into your spoons for the next day, but then you'll have even fewer spoons tomorrow.

The difference in being sick and being healthy is having to make choices... the rest of the world doesn't have to.²
